August 4th is the day with the lowest chance of rain in the entire year in Seattle. Only 9 times in 121 years – 7%
And In the Future Too! The Northwest is the Place to Survive Global Warming

- Temperatures will rise more slowly than most of the nation due to the Pacific Ocean.
- We will have plenty of precipitation, although the amount falling as snow in the mountains will decline (will fall as rain instead). There may be more flooding.
- The Pacific Ocean will keep heat waves in check and we don't get hurricanes.
- Sea level rise is less of a problem for us due to our substantial terrain and the general elevation rise of our shorelines.
- There is no indication that our major storms...cyclone-based winds ... will increase under global warming.
Thank you Betsy and Steve
